

Kotlin Multiplatform / Mobile Engineer (3+ years)

Ruslan Gadzhiev | [Email](#) | [LinkedIn](#) | [GitHub](#) | [Telegram](#)

Location: Georgia (GMT+4)

Work format: Remote / Office / Contract

Relocation: Open to relocation

Languages: English(B1)

About me

Kotlin Multiplatform Engineer with 3+ years of experience building production app. I specialize in designing multi-module architectures, setting up projects from scratch, and delivering cross-platform products using Kotlin Multiplatform and Compose Multiplatform. In projects, I take ownership of technical decisions: architecture, navigation, state management, and integrations. I work closely with designers and backend engineers and participate in requirement discussions. Actively contribute to open-source projects and maintain my own projects.

PROFESSIONAL EXPERIENCE

Kotlin Multiplatform Developer | Secret Santa | Aug 2024 – Dec 2025

[Play Store](#) [AppStore](#)

- One of the core developers in a small product team (mobile + backend + design)
- Took ownership of the mobile architecture: multi-module setup, navigation, and state management
- Designed and implemented the app from scratch using KMP for Android and iOS
- Built UI with Compose Multiplatform, working closely with a designer to validate UX decisions
- Integrated OAuth (Google / Apple sign-in), handled auth flows and edge cases
- Participated in requirements discussions and technical decision-making
- Conducted code reviews and kept architectural consistency across modules

Tech Stack: KMP, Compose, Decompose, Clean Architecture, KoinAnnotations, KtorFit, Firebase

Android Developer | [4Taps](#) | jan 2023 - sep 2024 | Part-time

- Sole Android developer responsible for the application from scratch
- Designed the entire architecture and module structure using Clean Architecture
- Built UI with Jetpack Compose and created a custom UI kit
- Integrated payment terminal functionality and worked with hardware-related APIs

Tech Stack: Android, Kotlin, Jetpack Compose, Clean Architecture, Dagger/Hilt, Multi-Module

CONTRIBUTIONS

Contributor to [BitChat](#), [GIT](#) — participated in Android development and code improvements

Author of [TetrisLite](#) — open-source Kotlin Multiplatform project showcasing multi-module architecture and nativeUI(React, ComposeWear, SwiftU, ComposeI)
